Professional Summary

Computer Science Engineering student specializing in IoT, Cybersecurity, and Blockchain with hands-on experience in software development, AI-assisted systems, cloud applications, and rapid prototyping. Built projects across healthcare, inventory management, automation, IoT, and mobile applications using Python, PHP, JavaScript, React, Flutter, MySQL, Firebase, Supabase, and blockchain technologies. Multiple 1st-place finishes in cybersecurity, blockchain, programming, and technical competitions. Founding Vice President of the ICSB Club and recently selected as an AWS Student Builder Group Leader (SBGL) for the college. Strong problem-solving, technical leadership, communication, and product development skills with an interest in scalable, user-focused engineering.

Education

P A College of Engineering, Mangalore 2023 – 2027
B.E. in Computer Science and Engineering (IoT, Cybersecurity & Blockchain)
Vice President, ICSB Club — CGPA: 6.71 Leader, AWS Student Builder Group at PACE

Sharjah Indian School 2009 – 2023

Technical Skills

Programming	Python, Java, C, C++, JavaScript, PHP, SQL, HTML, CSS, Dart
Frameworks	React, Vite, Flutter, Bootstrap, AJAX, Tkinter
Databases	MySQL, Supabase, Firebase
Cloud / DevOps	Firebase, Supabase, Blynk Cloud, Git, GitHub, Google Cloud Fundamentals
Domains	Cybersecurity, Blockchain, Internet of Things (IoT), Artificial Intelligence, Machine Learning, Cloud Computing, Full-Stack Development
Tools	Arduino, ESP8266, VirtualBox, Kali Linux, Figma, LaTeX, Visual Studio Code
Professional	Technical Leadership, Problem Solving, Collaboration, Communication, Mentoring, Rapid Prototyping, UI/UX Design, Prompt Engineering

Experience & Leadership

AWS Student Builder Group Leader (SBGL) 2026 – Present
AWS SBGL Leader – P A College of Engineering

- Selected as an AWS SBGL Leader to support student engagement, technical learning, and cloud-focused activities within the college community.
- Promote hands-on exploration of AWS and cloud technologies through peer learning, technical sessions, and community initiatives.
- Encourage students to build practical projects and explore cloud-based solutions through workshops, collaboration, and technical mentoring.

ICSB PACE — IoT - Cybersecurity - Blockchain Club Sep 2024 – Present
Vice President (Founding Member)

- Co-founded the college technical club and helped establish its identity, branding, and student-facing technical community.
- Organized and led technical workshops on IoT, Cybersecurity, Blockchain, and AI-driven innovation for 60+ participants.
- Conducted practical sessions on VirtualBox, Kali Linux, and social media phishing awareness using live demonstrations.
- Mentored students on AI-assisted development, rapid prototyping, and frontend development through project-focused sessions.

Selected Projects

AI-Assisted Blockchain-Enabled Emergency Healthcare Access and Consent Management Framework Using IPFS (ABDM-Inspired) Aug 2026 – Sep 2026
Role: Project Initiator & Technical Lead — AI, Blockchain, IPFS, Healthcare Interoperability

- Initiated the project from a real-world emergency healthcare access problem involving unavailable patient records during inter-hospital transfer.
- Defined the system architecture combining AI-assisted patient identity resolution, blockchain-based consent and audit management, and encrypted IPFS-based medical record storage.
- Led technical direction for emergency access workflows, identity resolution, consent management, interoperability concepts, feature definition, and technology selection aligned with ABDM architecture.

WinSoft Print Station – Smart Automated Receipt Printing & Archiving System Aug 2026 – Sep 2026
Android, Google Drive, CSV Processing, Print Queue, Thermal & Office Printers

- Designed and developed an Android-based automation system to process WinSoft transaction data, manage receipt generation and print queues, and support automated printing.
- Integrated Google Drive for file retrieval and archival, with configurable printing workflows for thermal and

office printers.
- Designed the system to reduce manual receipt handling through automated processing, printing, and post-print file organization.

RailBro – Smart Railway Crossing and Commuter Assistance System Sep 2025 – Nov 2025
Flutter, Firebase, APIs, Machine Learning, Cross-Platform Development
- Proposed and led a mobile application for railway crossing status prediction, commuter alerts, alternate routes, and delay assistance.
- Independently handled most of the project lifecycle, including system design, Flutter development, prediction logic, API integration, Firebase integration, and application testing.
- Extended the concept with commuter services including taxi/auto booking and railway food ordering.

StockIT – Multi-Tenant Inventory & Invoicing System 2025
PHP, MySQL, Bootstrap 5, AJAX, Python, ARIMA
- Built a multi-tenant inventory and invoicing platform with role-based access for Super Admin, Company Admin, Staff, and Viewer users.
- Implemented stock tracking, barcode scanning, transaction history, credit/cash management, dashboards, and predictive analytics using ARIMA forecasting.

WinAuth – License Key Automation App Jul 2025
React, Vite, Supabase
- Modernized an Excel-based license key workflow into a cloud dashboard for employee requests and administrative approval.
- Implemented secure transaction logging, request management, email notifications, and admin controls for activation key generation.

AirZayM – Airline Reservation System 2022
Python, Tkinter, MySQL, Figma, ReportLab
- Designed and built an airline reservation system with an intuitive booking interface, email confirmations, and automated PDF ticket generation.
- Developed an early full-stack desktop application that strengthened practical experience in UI/UX and software design.

Plynt – Smart Irrigation IoT System 2023
ESP8266, Soil Moisture Sensor, Blynk Cloud
- Developed an IoT-based irrigation system that automates watering using real-time soil moisture readings and cloud monitoring and enables controlling DC Pump through a mobile app.
- Awarded 2nd Place in an IoT Project Competition.

Research Publication

RailBro – Smart Railway Crossing and Commuter Assistance System 2025
Published Research Paper — ICEST 2025
- Published a research paper based on the RailBro project at ICEST 2025, presenting the proposed approach for railway crossing assistance and commuter support.

Achievements

- **1st Place – National Level Intercollegiate Tech Quiz**, St. Aloysius Institute, Nov 2024
- **1st Place – Capture The Flag (CTF) Competition**, Ethical Hacking & Cybersecurity, Apr 2025
- **1st Place – Blockchain Project Competition**, Decentralized Voting System, Aug 2025
- **1st Place – Java Coding Competition**, ATM Simulation Challenge, Sep 2024
- **2nd Place – IoT Project Competition**, Smart Classroom Automation, Oct 2024

Certifications

- **Networking Basics** – Cisco Networking Academy (Oct 2025); **Prompt Engineering Bootcamp** – LetsUpgrade (Oct 2025); **AI for Beginners** – HP Foundation (Sep 2025)
- **Introduction to Cyber Security** – Simplilearn (May 2025); **Introduction to LaTeX** – GEO University (May 2025); **Introduction to Git** – Coursera
- **Google Cloud Certifications** – Introduction to Generative AI; Create & Manage Cloud Resources; Perform Foundational Data, ML, and AI Tasks; Google Cloud Computing Foundations
- **Python Basics** – Infosys Springboard; **C Training** – IIT Bombay; **Python 3.4 Training** – IIT Bombay
